AQUAEL ASAP internal filters – it's never been so easy!

AQUAEL presents a revolutionary new line of internal aquarium filters. The ASAP filters combine high performance and great usability features with a clever design that reduces the time required for maintenance works.

The ASAP internal filter consists of a **modern energy-efficient motor** placed in a stylish housing and a large transparent filter bowl filled **with carefully chosen filtration sponge**. The sponge is quickly populated by beneficial bacteria, so water passing through the filter undergoes biological as well as mechanical filtration. Thanks to that, it stays clear and safe for the inhabitants of the aquarium. The filter requires two basic types of maintenance procedures. One consists in removing the filter bowl and replacing it with a new one (we offer standard cartridges as well as cartridges with activated carbon or phosphate absorber to prevent the growth of algae). The other involves the rinsing of filtration sponge in water drained from the tank. This operation can be performed without the need to remove the entire filter from the aquarium tank, which is very convenient and significantly reduces maintenance time.

The new ASAP internal filters are also **ideally suited for use in aquaterrariums**, since they can operate in shallow water as little as 5 centimetres deep. In addition, they effectively oxygenate water in the tank by causing a strong movement of the water surface.

There are three models of the filter available, with a capacity of 300, 500, and 700 l/h correspondingly. They are designed for use in aquarium tanks with capacities ranging **from a few dozen to 250 litres**. Thanks to their functional properties, these filters can be used by **beginning and experienced aquarists** alike.

- high-performance, efficient water filtration
- simple design: easy to install and maintain
- equipped with a modern motor – low power consumption
- the filter bowl is easy to clean or replace (replacement parts can be purchased separately)
- works well in shallow water – perfect for aquaterrariums

ASAP

Simple and efficient

ADJUSTABLE DIRECTION OF THE WATER OUTLET

TRANSPARENT FILTER BOWL
easy monitoring of the degree of pollution

VERY EFFICIENT
mechanical and biological filtration

MODERN ENERGY-EFFICIENT MOTOR

WORKS ALSO IN SHALLOW WATER
(FROM 5 CM)
perfect for aquaterrariums

SAFE FOR SMALL FISH

EASY ASSEMBLING
AND ROTOR CLEANING

VERY EASY
REPLACING AND CLEANING
OF FILTER MEDIA
